

PRACTITIONER BIOGRAPHY

Dr. Lorna Fowler BDS (GDC No. 61979)

I qualified from Dundee University in 1986. I joined the practice in 1989. I currently work full time at the practice.

I have a particular interest in preventative and cosmetic dentistry and offer minimal invasion techniques such as air abrasion to carry out restorative treatment - new technology which is an alternative to the drill. I also offer diagnodent, this is a new laser system used to detect decay in teeth, again reducing drilling to a minimum.

I hold the position of Radiation Protection Supervisor within the practice and attend regular courses to ensure I am fully up to date with all aspects of dentistry including radiography.

I welcome new private patients.
